## TRAGEDY IN ATLANTIC OCEAN 1500 DEAD

Titanic setting sail from Southampton

### Titanic sinks in the Atlantic Ocean

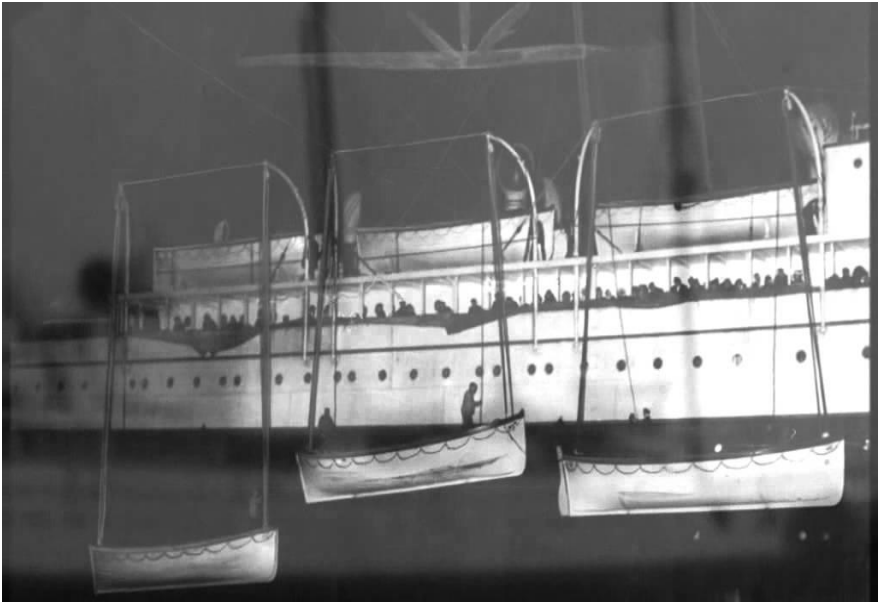

LEO PAPADOPOULOS

16 APRIL 1912

On the 14<sup>th</sup> of April the vessel, RMS Titanic, hit an iceberg in the Atlantic Ocean and sank. One thousand five hundred and three people sadly lost their lives. However, 713 passengers survived by getting into lifeboats having to observe their fellow passengers drown in the hypothermic waters. Most of the deaths were 3rd class passengers.

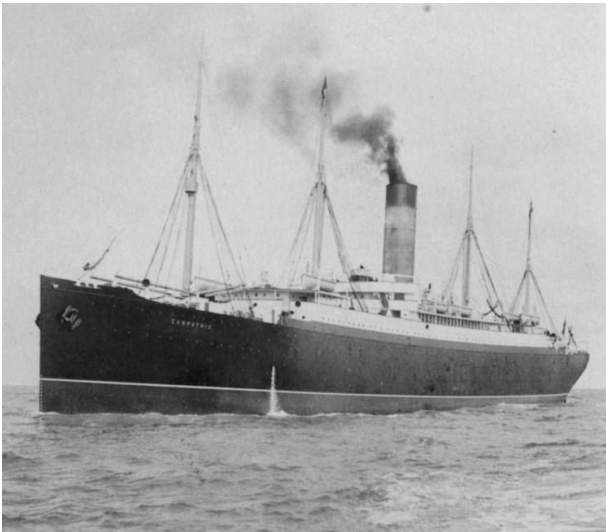

After the colossal ships fourth day at sea, a submerged iceberg ripped the hull. It took two hours to completely sink the ship. Engineers that worked on the Titanic reported a fire in the boiler room which lasted for days, weakening the hull before its leave from Southampton harbor.

We interviewed a few of the survivors, but some refused the offer to speak out. Bob Reeves, who helped build the Titanic, claimed that, “It took 26 months to build this ship. We got paid very little, and it was very tiring we had no idea it was going to sink everyone thought it was unsinkable but clearly it was not.” People are improving the safety of ships, so that disasters such as this can be avoided in the future. More lifeboats are needed as every passenger, regardless of class, has a right to survive.

CARPATHTHIA SAVES 713 PASSENGERS FROM TITANIC DISASTER

### Carpathia saves hundreds from Titanic Disaster

Leo Papadopoulos  
April 16<sup>th</sup> 1912

Hundreds of passengers were stranded on life boats in the Atlantic Ocean until RMS Carpathia came to rescue them yesterday. They were taken to New York where they had originally intended. to go. The traumatised passengers were reunited with any relatives they had left. Those that made it to New York are extremely lucky. Whilst many people died in the ocean, these lucky passengers are now safe and can start a new life in New York.
